Region 51 Frequency Planning Committee

RE: Call sign WPKL474

I had to modify the Effective Radiated Power on call sign WPKL474 location number one Dickenson, Texas from 98 watts to 400 watts. I noticed it was incorrect when I was going through my call signs. I need an approval letter from the Region frequency committee approving this. It will not exceed the coverage map because the coverage map was done for the correct ERP, the license was done incorrectly.
